

KILL DEM MOSQUITOES DEAD!

THESE EASY TRAPS CAN KILL OVER 90% OF MOSQUITOES, AND 100% OF EGGS AND LARVAE!

Here's what you need:

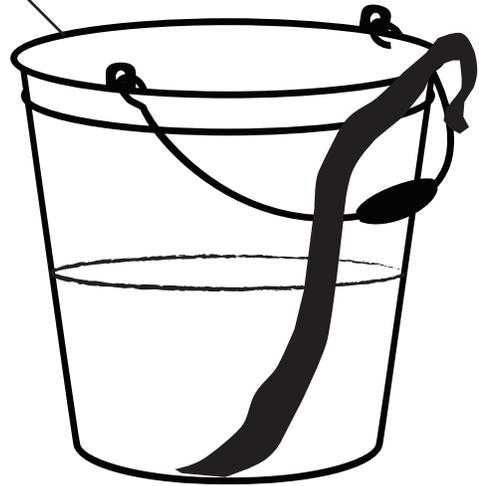

- ✓ Small handful of compost or yard waste.
- ✓ A quart-sized or bigger container with an opening of at least 3 or 4 inches. It needs to be smooth on the inside.
- ✓ Terro Ant Dust*. Kills fire ants too! Get it at Home Depot or Amazon for about \$8, enough to make hundreds of traps.
- ✓ Boric Acid* (kills roaches! - \$5-\$10 bucks just about anywhere!) or mosquito dunks.
- ✓ Some heavy, rough paper, like builders paper from a hardware store, or heavy cloth
- ✓ Some tape or rubber bands.

Here's what to do:

- 1 Half fill the container with water.
- 2 Add a heaping teaspoon of boric acid for every quart of water. Stir to dissolve.

Put a small handful of stinky compost or yard debris in the bottom of the container.
- 3 Cut your paper or cloth into a strip 1 or 2" wide and long enough to reach from an inch above the rim to the bottom. Moisten the paper or cloth and sprinkle Ant Dust over both sides, then smear around. Wear gloves! Shake loose dust off.
- 4 Place the strip inside, and hang an inch over the rim. secure the strip with a rubber band.
- 5 Place in a shaded area that is protected from rain – or inside!

For best results:

- REALLY IMPORTANT! - dump out any standing water on your property or near your house. Treat water features with Mosquito Bits or Dunks.
- Check the trap regularly, and remake every 30 days. Don't let them become mosquito factories!
- 4-10 traps per household is da best! You can use them inside the house too!
- If your container is not black, then paint it or wrap it in black plastic (like a garbage bag).
- Be safe! Read the directions and follow the safety advice.

* Terro Ant Dust uses a man-made pyrethrin that has very low toxicity to animals, so it's safe! It does harm fish so keep it out of your pond. Instead of boric acid, try Mosquito Dunks, which use BT (bacillus thuringiensis).
